

DEXRON III

Alubricant for automatic transmissions, DEXRON III conforms to both GM's DEXRON and Ford's MERCON specifications. DEXRON III can also be used for electronically-controlled automatic transmissions due to its low viscosity grade. DEXRON III features high fluidity even at low temperatures and thereby reacts faster to cold startups, giving it a smoother shift feel. DEXRON III has exceptional film strength even at high temperatures; it also features anti-wear, anti-corrosion and antifoam properties.

SPECIFICATIONS

Product

DEXRON III

Feature

Anti-oxidation properties. Oil film stability even under high temperatures.

SAE/DOT Standard

—

Specification

GM DEXRON III & FORD MERCON

Maker's Approval

ALLISON C-4, CATERPILLAR TO-2

Compatibility

All types of automatic gearboxes & transmission, torque converters, power steering systems and boats with reverse gears.
